

## Why You Should Consider DogecoinLabs In Your Portfolio

DogecoinLabs is a well-established and highly regarded venture in the rapidly expanding digital assets industry and integrated decentralized world. It is transforming how people invest in digital assets.

One of the components likely to work in Dogecoin Lab's favor is its recent introduction into the Metaverse and AI production.

The Metaverse and AI production represent an exciting, interactive virtual world, and they're portrayed as two of the most fantastic things in crypto. Still, the Metaverse and artificial intelligence are only two arguments for considering Dogecoin Labs in your portfolio.

Other key points include:

### NFT Studio

DogecoinLabs is one of the world's largest NFT studios, with a talented global workforce consisting of designers and art experts. It is committed to the top-quality and exceptional design and production of NFT collectibles.

The project has secured funding for a minimum of 8 million production items by promising 80% of the coin supply in a particular escrow account. The leading cause is to develop 1,000,000 collectibles a year.

This exclusive escrow account is for four years. Any coins released from the escrow account will be sent to the zero accounts to be burned out entirely.

### AI Production

Dogecoin Labs has increased its AI production capability using the latest and most advanced technology. iNFTs (non-fungible intelligence) is one of the most revolutionary steps of NFTs.

Non-fungible intelligence has quickly caught the attention as more people understand that the future of the Metaverse and decentralized economies will soon move to this high-tech knowledge.

iNFTs symbolize the property of a character, symbol, art, or virtual land and the holding of artificial intelligence. Intelligent non-fungible items allow you to interact, learn, and grow over time.

### Play-to-Earn Games

One of the most attractive features of Dogecoin Labs is its path to develop the most advanced and rewarding play-to-earn games and other Metaverse Apps.

Play-to-earn games are lucrative for players and developers. Players can earn money while developers expand their designs and get more revenue as the ecosystem grows.

### 10% Distribution in the form of BNB Binance Native Token

The unique hyper deflationary coin structure of Dogecoin Labs offers coin holders 10% distribution in the form of BNB Binance Native Tokens on an hourly basis with no risk by collecting the tokens and storing them in a DeFi platform which over time is going to burst.

Besides, 50% of the NFT's 10% royalty revenue will be used to buy back coins at the open market and burn them permanently. This process will result in a higher appreciation for Dogecoin Labs.

## Dogecoin Labs Building a Successful Path

DogecoinLabs is building a successful path as it's raging in popularity today. The project is in the direction of designing more than one million NFT collectibles annually.

The total funding for up to eight million NFT collectibles is in place, and no further borrowing or fundraising is needed for the entire production.

People considering Dogecoin Labs in their portfolio can rest assured that all NFT collectibles are fully secured and stored in IPFS files with one of the most reliable providers in the industry.

The ultimate goal of the venture is to create magnitude and sustainable cash flow, which will enhance token holders' value.
